Parking Lot Asphalt Repair		Number P001	Date Posted: Sept. 20/10
Category Property & Maintenance - Outdoor	Type Project		
Description In a few places in the parking lot, the pavement has either been damaged or is cracking. This repair would involve cleaning the area to be patched, preferably with a power washer, and depending on the outside temperature, perhaps heating the spot with a propane tiger torch before applying cold asphalt patch. It may also be preferable to brush the area with used motor oil before applying the patch. The patch is purchased from Home Depot or Rona and comes in 25kg bags. This is a little bit messy and you will want to wear heavy rubber gloves (or ones you don't mind turning black) when handling the asphalt. The patches then need to be compressed either by hand tamping or by driving over.			
Importance	Medium – This should get done before winter		
Time estimated to complete job	4 hours		
Special skills required	Strength enough to handle the heavy bags.		
Special tools required	Pressure washer, Tiger torch, Rubber gloves		
Budget	\$75		
Contact person	Dave Anderson		
Additional Notes Dave has a pressure washer, used oil, and could probably track down a tiger torch to use.			

Casual Ministry Response Form

Fill out, detach this form and turn it in at the office, or put it in the offering plate. Take home the top portion for your information.
